## Terraform Workbook

”

1. Create a Module in terraform to create ubuntu 22.04 vm. Ensure this module is hosted in git repository.
2. Use this module to create two vms red and green (terraform template)
3. Create a null resource to install spring petclinic
4. Try to generate ansible inventory as output from following file <https://faun.pub/how-to-create-ansible-inventory-with-terraform-a32fcbe11be6>
5. Ensure you can execute provisioning only on red or blue based on input variable
